My feedback

#### Drill-down

The current version of Power BI visualisation framework does not support access to the previous levels in a drill-down. I.e. you only get access to the current level when rendering. That makes it very hard to develop visualizations such as pivot tables or breakdown trees.

This would let custom viz developers add thing like pivot tables and Breakdown Trees :)

[This idea was created as an offshoot of <https://ideas.powerbi.com/forums/269200-power-bi-ideas/suggestions/15844186-pivot-tables-and-breakdown-trees>. Fredrik had initially asked for updates to the Custom Viz API, but many votes and comments were cast assuming the idea was just asking for the Power BI team to...

UNDER REVIEW

Lukasz Pawlowski (Senior Product Manager, Microsoft Power BI) responded

Thank you everyone for the comments and votes. We're looking into what could be done here. To be transparent, so far our findings are that the infra to do this right for the long term is actually a very large intricate work item. So I cannot say when we could actually delivery this capability. Our current focus with custom visuals is to continue filling in the existing features into our stable APIs so that custom visuals are fully compatible version on version. This itself is vital work in the custom visuals area both for our custom visual authors/developers and for users who depend on the visuals day in and day out. Appreciate your using Power BI, keep the suggestions coming! We read every comment you make, even if we're not able to respond to every single one.
