

FREE 1-ON-1 EXPERT CONSULTATION OF YOUR DYNAMICS AX SECURITY

"ASM is a great way to manage security! The interface is so much easier to use than doing it natively. The support is fantastic! The process is easy, you can submit a ticket on their website, and they schedule a screen-share meeting and walk you through the process to fix your problem. Great service!"

Greg Miller, PMP, Affiliated Resource Group

Professional Assessment by Leading Experts in Dynamics Security

Arbela is offering a live, one-on-one, professional consultation at no charge with our leading experts in Dynamics AX Security. This is great for companies and end-users that need expert advice while learning about security best practices based on real-life scenarios.

This consultation is suited for IT System Administrators and users working within Dynamics AX and have questions in any of the following areas:

-  **User Role Assignments** - Understand how your users have been assigned to roles and the role structure your users are assigned to. This area tends to have issues with users being provisioned access that is either too much or too little.
-  **Role Configuration** - Have you designed any custom roles? Did you build your roles based on business processes or around out-of-the-box configurations? Do you know how many licenses you have consumed? We review the roles that are created and ask key questions to help better assess the role structure for your business. A critical step in any security implementation.
-  **Best Practices** - Identifying your security model can help uncover issues that could potentially lead to errors, improper access or other problems. We advise you on best practice recommendations and next action items you should consider for a mature security model.
-  **Identify Risk** - Determining how your security model is built can help identify risk whether it is in your security model or at the implementation itself. Sometimes, a business may not be aware of the current risks. We can identify where your main risks are and propose solutions.

Stuck with an issue around security?

No problem.

Our assessment is offered to you live via GoToMeeting with a professional security consultant. Our consultant will set up a time that works for you.

Need to set up your security? We've got you covered.
