940 — Warehouse Shipping Order
943 — Warehouse Stock Transfer Ship. Advice
944 — Stock Transfer Receipt Advice
945 — Warehouse Shipping Advice
947 — Warehouse Inventory Adj. Advice

REQUIREMENTS

Microsoft Dynamics 365 Business Central

Set Your Data Free

Spend less time managing your EDI relationships and more time growing your client relationships.

bcEDI + SPS Commerce is built on nearly two decades of experience in the EDI solution space. It has been developed specifically to make the EDI process in Microsoft Dynamics 365 Business Central easy to manage and cost efficient to deploy.

Utilizing the latest technology and document standards, bcEDI + SPS exchanges data with external business partners and applications in a unified, consistent manner. This enables you to spend less time maintaining your EDI relationships and addressing compliance issues, which in turn allows you to expand your business and bring new EDI trading partners online with ease and confidence

All the necessary tools for transmitting, receiving, and transforming EDI messages into XML, flat file, or any other XSLT transformed format are available out of the box inside of Dynamics 365 Business Central.

You can monitor and process EDI activities and messages via the EDI Dispatch page.

Does this Sound Familiar?

You do business with several customers that require you to be EDI compliant. You are currently using a stand-alone legacy EDI application that is not integrated or partially integrated with your ERP solution, such as Dynamics 365 Business Central. If integration is present, you are required to both read and translate X12 data and the related specifications, or you have a custom solution for converting EDI legacy files from your EDI application to a format that your ERP solution can interpret. You may also have a hosted e-Commerce solution from which you currently print web orders, which you then have to manually re-enter into your ERP system as sales orders.

In short, your EDI solution is unstable, complex, and time-consuming to maintain.

As your business grows and the volume of your e-Commerce web orders increases, so do your EDI problems. You find that more and more time is spent on verifying and re-keying data in your ERP solution, maintaining EDI compliance with your trading partners, and managing your EDI application.

Say Goodbye to Handling Data Multiple Times

It used to be that growing your business meant an ever-increasing burden to re-keying data and verifying accuracy. bcEDI + SPS maintains compliances and populates all your data into the right space with one entry.

bcEDI + SPS enables integration between Dynamics 365 Business Central and your trading partners by connecting to the [SPS Commerce](#) retail network of over 3,500 buying organizations. bcEDI + SPS offers a full service, multi-tenant, cloud-based solution that lets you leave EDI to the experts. Our approach employs a single XML mapping per document type, instead of maintaining document mappings for each type and trading partner combination in X12 or other legacy flat file formats. This will significantly decrease your maintenance of the EDI process and allow you to bring new trading partners online faster than ever.

The bcEDI solution includes pre-built XML ports for many common inbound and outbound SPS document types, further enabling the rapid and reliable deployment of an integrated solution.

In addition, new document types that map to your e-Commerce solution provider's XML or flat file data structures can be quickly developed to fully automate the integration between Dynamics 365 Business Central and your e-Commerce site.

“Beck is one of the best teams I have worked with in my career.” - Riyadh, VP of Global IT, aden + anais

Enjoy the Freedom of Full Automation

bcEDI + SPS for Microsoft Dynamics 365 Business Central enables your company to do EDI the easy way!

While the technology is up-to-the-minute, the bcEDI + SPS tool is itself straightforward and easy to use, connecting you to your trading partners in practically no time. A highly flexible solution, it easily keeps pace with evolving industry standards.

The solution's rapid deployment and minimal maintenance requirements over subsequent versions result in a product that is cost effective in both the long and short term, ensuring an immediate and lasting return on investment.
