

E-JUSTICE MANAGEMENT

Brief Document

SUMMARY

This project is all about providing **information and communication technology** enablement of courts to make justice delivery system affordable and cost-effective. The objective of the E-Justices project is to provide designated services to litigants, lawyers and the judiciary by universal computerization of courts in the country.

BRIEF

e- Justice system enables the subjective courts to digitize their court process seamlessly. This system enhances the user experience digitally thereby reducing the paper work in the court process. Few of the system features mentioned below will be included in the future scope of the product.

- Visibility of Case document to the subjective representatives.
- Approval system at every stage in the court process.
- Dynamic Approval and Case Management during Deployment.
- Case status visibility by the designated user.
- Case approval notification.
- Case record maintenance.
- Decentralized block chain record storage.
- Online payment system for various court related charges.
- Judgement update visibility to the subjective users.
- Case report generation upon request by the designated users.

The system is very secure that every module in the software is protected by the firewall systems. Data access and retrieval is limited only to the designated users so that sensitive data isn't visible to the general public. Automated system software incident management is implemented in this system to minimize the downtime.

NOTE: KINDLY CHECK THE DEMO FOR DETAILED ILLUSTRATION OF THIS PRODUCT.
