

Data Warehouse Health Check Key to Boosting Business Intelligence Performance

HEALTHCARE

Small companies can reap major gains by consulting an outside data analytics expert. But major corporations also recognize the potential rewards of independent business intelligence insight. At BlueGranite we work with both, and everyone in between. A top medical provider for several communities in the South, with annual net revenues over \$1 billion, brought us on board to perform what's known as a Health Check. It's where we take a close look at an organization's existing corporate insight system and analytics practices. We highlight the wins, and areas for improvement.

Companies having performance issues and those looking to make the most of their data seek Health Checks. We wrap up the standalone offering with a file detailing system assets, problems, next steps and remedies. For companies lacking time or staffing, we implement priorities.

While this healthcare provider didn't fall into the above categories – it was getting the most out of its data, and it didn't have performance issues – it had a proactive database administration team. They wanted us to inspect the reporting system to ensure they were making the most of its potential.

By taking a deep dive into the company's data warehouse, running scripts and evaluating performance, we discovered a few hidden glitches that could create future difficulties. Best practices for the company's digital medical records system differed slightly from those of the database management system. The integration inconsistency meant that if two people were trying to get the same database request, the requests could cancel each other out, with neither getting the needed resources. A slight reconfiguration remedied this. Additional tweaks created greater data visibility. The minor fixes prevented what could have been major future headaches.

BLUEGRANITE

DATA • INSIGHTS • ANALYTICS

TAILORED FOR YOU

No two Health Checks are alike. We tailor each engagement to meet your needs. If you are upgrading your environment, will it migrate well? Is the environment secure enough? Does your current architecture fit your long-term goals? We work with you to answer these questions, and then develop a roadmap for the future. Take the first step and learn more about opportunities for scheduling your own Health Check today!

ABOUT US

At BlueGranite we help our clients utilize data as a strategic asset, delivering data architecture and data integration solutions to drive insights and analytics across your organization. Our solutions monitor trends, measure performance, and provide real-time analytics for rapid, informed decision making. We leverage industry leading technology from Microsoft to build modern data platforms that reduce operating costs, increase market share, improve workforce efficiency, and so much more.

DISCOVER

Gain an understanding of use cases, vision and strategy for data and analytics; explore new and innovative solutions to gain insights from data and improve data availability. Through workshops, proof-of-value engagements, and QuickStarts, we can help you begin your journey.

CREATE

Make it real! BlueGranite will architect, build and deploy new BI and analytics solutions to address pain and realize the projected gain for your organization. We'll combine our deep experience with the latest tools for data and analytics for both cloud and on-premise scenarios.

REALIZE

Extend the value of your analytics solutions through support, maintenance, and enhancement. Change organizational culture through the establishment of a Center of Excellence complete with governance initiatives from data management to self-service BI.
