

An abstract digital network graphic is located in the top left corner. It features a complex web of glowing blue and yellow nodes connected by thin lines, set against a dark blue background. The nodes vary in size and brightness, creating a sense of depth and connectivity.

## Today's Enterprise Need To Innovate With Speed

As we strive to transform our organizations, there is a need to try out new things, new ideas, new concepts. Most of the time it requires multiple stakeholders to get convinced about the new business model or a new way of doing things.

Proof of Concepts (PoC) are generally the most accepted and proven path for a primary stakeholder like IT or Business, to convince others about the usability of a new idea.

Today's Agile/Lean Organizations work on following principles.

- Fail fast
- Fail early
- Decide as late as possible
- Deliver as fast possible

All these principles will help you as a primary stakeholder to conceptualize a new idea and take it up with other stakeholders, iterate and perfect it.

**When PoC's Become Projects:** However, while the organizations wanted to innovate, sometimes PoC path takes them nowhere as they are conducted like projects with long schedules running into months and with more effort and cost. It drains the energy of stakeholders and further constrains the budgets allocated for the innovation initiatives.

GAVS PoC helps organizations realize the value of Blockchain, utilizes the power of Powerapps platform in delivering effective PoC in short time, yet providing all the features typical of an enterprise class application.

A large red circular graphic is positioned on the right side of the page. It consists of a large outer ring and a smaller inner circle, both in a solid red color. Below the inner circle are two smaller red dots, one above the other, creating a visual element that resembles a stylized '1' or a similar symbol.

The following are some of the salient features:

**70% productivity improvement:** Categorized under high performance and low code application platform, both industry analysts as well as GAVS' own internal case studies prove that by efficiently using Powerapps we could gain a 70% improvement in productivity, which means the organization's mission to "Deliver fast" is achieved.

**Real time integration:** Most PoCs will provide value to stakeholders if they work on real business data and not mock data. For example, if the business would like to see a CRM PoC, they would be most benefited if some real leads are picked up from their CRM system. With its pre-built connectors to 200+ applications, Powerapps indeed provides great value to the stakeholders in visualizing real benefit of the innovation in their own terms.

**A connected technology ecosystem:** Newer innovative ideas around technologies like Blockchain, don't just end with that. Typically, they are connected with other complimentary

technologies like **AI, Cognitive Computing, NLP, IoT, Conversational Technologies and more.**

Powerapps with its seamless integration with Azure services make that ecosystem easy and seamless.

**Any time, anywhere & any device:** Your stakeholders may be across geographies and work on different time zones using different devices. Hence natively customized cross platform application is the most desirable to conduct a successful PoC which is enabled by Powerapps.

**No CAPEX, no maintenance, serverless:** Most of the times organizations scramble for resources in terms of hardware, software, licensing when it comes to doing innovation projects. Our model powered by Microsoft Business Application platform completely takes the worry from you, everything can be just in time and the resources can be removed after the PoC to cut costs.

So what are you waiting for?

Why not innovate on **how Blockchain platform will best help your organization to transform?**

GAVS 1-week PoC powered by **Azure Blockchain as a service and Powerapps will get you started and involve your stakeholders towards the path of your digital transformation.**

## About GAVS

GAVS Technologies (GAVS) is a global IT services & solutions provider enabling digital transformation through automation-led IT infrastructure solutions. Our offerings are powered by Smart Machines, DevOps & Predictive Analytics and aligned to improve user experience by 10X and reduce resource utilization by 40%.
