

## Extend Dynamics 365 Label Printing Capabilities with Print Suite Bridge

Looking to run Microsoft Dynamics 365 WMS Advanced and have printing needs that are not supported by Dynamics 365's limited capabilities? RF-SMART, a leading data collection solution for more than 30 years, has purpose-built workflows and applications to extend Dynamics 365 functionality to your warehouse. Print Suite Bridge is our standalone enterprise barcode and RFID labeling software solution that "bridges" different systems to meet your labeling needs.

### How Does Print Suite Bridge Solve Your Labeling Needs?

#### Pre-print Processing

- Adds fields to labels, no coding required
- Collects data from multiple systems
- Adds additional, potentially complex data to labels
- Supports parsing or concatenating codes - a current gap with Dynamics 365
- Maps variables to a label's data field

#### Post-print Processing

- Ability to print confirmations and error handling
- Store records and label images in a database
- Receive feedback on job and printer statuses in real-time

#### Configuration of Labels

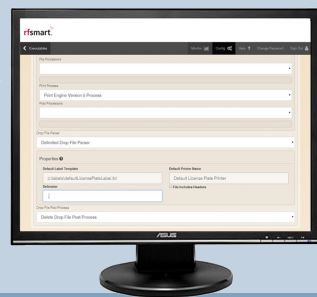

- Use popular scripting languages to search, request or manipulate data
- Automatically format dates and concatenate specific codes or variables
- Eliminate Zebra Printing Language (ZPL) Coding

### How Does Print Suite Bridge Work?

**rfsmart** Labels are designed using our user-friendly Label Designer

**rfsmart** PSB initiates label requests using executables

- With no limit to the number of executables, you benefit from increased stability and scalability for high volume printing.

**rfsmart** Once an executable is started, the pre-print processing can do the following:

- Read from Dynamics 365 or other external databases
- Collect data from a machine or piece of equipment
- Add more fields by linking or trimming existing fields

**rfsmart** After pre-print processing, labels are sent to the appropriate printer

**rfsmart** Post-print processing capabilities include logging print requests to another data source

**rfsmart** The Print Result is returned to the executable to relay status information

### Print Suite Bridge is a Must-Have If ...

- You want to print from Microsoft Dynamics 365
- You need a configurable way to enrich print request data for labels
- You have high volume printing requirements

#### REQUIREMENTS

Windows 7 +  
Windows Server  
2008 R2 +
