

NEXT GENERATION APPLICATIONS

Marquam has developed this FastStart program to support organizations that want to maximize productivity by leveraging the latest Microsoft technologies including Bot and Cognitive Services. Next generation applications adapt to user inputs, interpret data in real time and expand employee capabilities. The Marquam App Innovation FastStart program leverages the intelligent cloud and a wide variety of productivity tools that offer enterprise-grade security, availability and compliance.

APP INNOVATION WORKSHOP

This engagement brings our expertise to your doorstep. We educate your team on the new Microsoft platform and intelligence solutions. This includes Cognitive Services for vision, speech, language, knowledge and search. We will also dive into Azure Machine Learning that enables predictive analytics and the Azure Bot Service that interacts naturally with users within websites and applications. Finally, we will show you how to deploy cross-platform applications through Xamarin.

INTELLIGENCE ROADMAP

The modernization of your critical applications may seem daunting. Our goal is to work with your team to develop a strategic plan with value-driven deliverables. This collaborative effort will reveal opportunities for enhanced productivity within your applications, intranets and external websites. Once identified, Marquam will develop a next generation architecture that incorporates intelligence and scalability.

PROOF OF CONCEPT

Based on the Intelligence Roadmap, Marquam will develop a proof-of-concept for one business unit. We take the knowledge gained from our strategic plan and implement a combination of technologies that are guaranteed to enhance productivity and move you toward a more intelligent infrastructure.
