

Build Hybrid Cloud with Azure in 15 Minutes

No New Hardware Required

According to Gartner, 90% of the organizations will have a hybrid infrastructure by 2020. Today, IT organizations around the world are under pressure to transform to digital organizations and keep pace with business and regulatory demands. Our hybrid cloud solution works seamlessly with Microsoft Azure and enables enterprise customers to start moving workloads to a hybrid model within minutes rather than months.

What is Midfin Systems eFabric?

It is a software-defined hybrid cloud solution that works seamlessly with Microsoft Azure allowing hybrid enablement in minutes. Workloads can be moved around on-premise and Azure without requiring any configuration changes. eFabric works with commodity servers (even pre-existing ones) on-premise and Azure cloud.

Why customers use Midfin Systems?

- Deploy in minutes, saving months of planning and millions of dollars in cost
- Seamlessly migrate workloads between your datacenter and Microsoft Azure
- No need to purchase proprietary hardware. Works with all commodity servers, even existing ones
- Enterprise-grade security features including Azure AD integration, RBAC, and micro-segmentation to thwart ransomware

Unified Deployment and Management

- Deploy in 15 minutes
- Single sign-on using Azure Active Directory
- Automatically match blueprints with Azure machines
- Unified view of application metrics

Reduce overall Capex and Opex by 40-60%

Simplified Application Migration

- Adaptive overlay network
- Sticky IP address after application migration
- AES-256 GCM encryption with automatic key rotation

Zero or minimal application downtime. 90% faster time to value

Elastic Scalability and Security

- Persistent virtual firewall rules across cloud
- Load balance applications between on-premise and Azure
- Auto-scale applications to the cloud

As scalable as Azure cloud

eFabric® is light years ahead of other solutions. Can't believe it can be so simple! Team's support is excellent.

- Manuel Silva, CIO, ITH

How eFabric® works, to achieve business benefits

Secure, Simple and Smart

- Extremely easy to deploy by IT generalists
- Micro-segmented security reduces ransomware risks
- Saves 40-60% in total cost of ownership compared to traditional infrastructure

1-Click User Experience

- Modern user experience in a single pane of glass
- Most complicated configuration tasks within clicks
- Secure remote access with Azure AD and RBAC
- Smart and secure default configurations for quick use

eFabric® with Azure Combines Speed and Scale for Hybrid Cloud Solution

- 15 minutes time-to-value
- 3 minute workload movement
- Global scalability and footprint of Azure

Hybrid Cloud Pilot Offer

Our promise to you

100% risk-free pilot guarantee

An offer to get you started

- Test drive Hybrid Cloud powered by eFabric and Azure
- Zero risk test drive allows you to assess whether Hybrid Cloud is right for you
- Fixed price pilot to migrate a complicated line of business application to Hybrid Cloud model
- Lowers cost and risk of a full-scale rollout while providing you expert support from our expert hybrid cloud engineers.

Hybrid Cloud Does Not Have To Take Months and Millions

- Be several orders of magnitude higher agility than competitors
- Slash 6-9 months of planning time
- Save 40-60% on Total Cost of Ownership

Why Midfin Systems?

Featured as Top 25 Startups Worldwide by a jury of 39 top technologists empaneled by CNBC. Winner of several other industry awards (CIORReview, SiliconAngle). Doing business in US, Europe, South Africa and India.
