# DataOne

We provide customers with a dynamic business Intelligence (BI) portal as a service to accommodate and host all organizational BI reporting and analytic requirements. Through our BI platform we can host as well as design, build and manage existing and new reports for organizations that don't have the capacity to manage their BI demands and essentially taking the headache away for reports on demand.

Customers have the ability to provide relevant business intelligence to their business units that require immediate and ongoing insights to drive their business KPI's towards successful outcomes. Through this portal Northern Data has the ability to provide rapid and ongoing improvement and value ensuring reports are utilized correctly and applicable to business needs.

## Benefits

- Faster time to insight
- Help you achieve self-service BI faster
- Low monthly subscription cost
- No massive capital outlay
- Complete compliance with all global data and industry standards
- Data is securely stored
- Reports can be grouped into workspaces for convenience and security purposes
- Reports are fully interactive (Cross-highlighting and Filtering)
- State of the art technology that is current and continually updated without the need for hardware upgrades

## Additional Services

- **Data Science** – an additional service can be provided for further insights using data science techniques, models and algorithms that can be incorporated into existing reporting and dashboards or as separate business initiatives;
- **Data Performance Management & Monitoring** – Real time monitoring of your data infrastructure can be provided to ensure that your BI environment is continuously monitored, diagnosed and  optimized to ensure high performance;
