

MICROSOFT AZURE SOLUTION BUILDER PROFILE: PROSKRIPTIVE INTELLIGENCE SUITE

Proskriptive applies a *data science driven* approach to support performance improvement in healthcare organizations. The Proskriptive Intelligence Suite delivers automated insights to support quality improvement, reimbursement maximization—including MIPS/MACRA, ACO, BPCI, Shared Savings—and population health efforts.

WHAT WE OFFER

Proskriptive supercharges quality improvement efforts by injecting data science into processes that identify adverse situations before they occur. The Performance Intelligence Suite sits atop an Azure based data hub to automate and aggregate data feeds. Predictive models run against the most critical KPIs to guide processes and outcomes.

Healthcare organizations that participate in value-based contracts, like capitated payment structures and bundled payment initiatives, look for help to maximize their reimbursement payout. Proskriptive's Intelligence Suite enables customers to manage all their contracts within one location, so they know where to act to maximize reimbursement.

Managing population health can be complicated when the right tools aren't in place. Proskriptive applies data science to deliver more in-depth patient views so you can understand areas of risk, and more importantly, their risk of escalating to a higher utilization level. Microsoft Azure provides a HIPAA compliant platform that keeps your data safe.

Proskriptive gets clients to value, faster. From setting up the data architecture, connecting data to the right analytics, and automating processes, we have you covered. More than just software, healthcare organizations partner with Proskriptive to configure a solution that meets their needs in the journey to improve delivery of care.

WHAT OUR CUSTOMERS ARE SAYING

"More than just another software purchase, Proskriptive has integrated as a part of our team, helping us achieve more than we initially anticipated." – Customer Name, Title, Organization

Microsoft Azure

Microsoft Azure is an open and flexible cloud platform that enables you to quickly build, deploy, scale, and manage applications across a global network of Microsoft data centers. You can build applications using multiple languages, tools, and frameworks.

KEY USE CASES

WEB APPLICATIONS

Build anything from lightweight websites to multi-tier cloud services that scale up as your traffic grows.

CLOUD STORAGE

Rely on geo-redundant cloud storage for backup, archiving, and disaster recovery.

BIG DATA & HPC

Get actionable insights from your data by taking advantage of a fully compatible enterprise-ready Hadoop service.

MOBILE

Accelerate your mobile app development by using a backend hosted on Microsoft Azure. Scale instantly as your install base grows.

MEDIA

Create, manage, and distribute media in the cloud – everything from encoding to content protection to streaming and analytics support.

FLEXIBLE APPLICATION MODEL

Microsoft Azure provides a rich set of application services, including SDKs, caching, messaging, and identity. You can write applications in .NET, PHP, Java, node.js, Python, Ruby, or using open REST protocols. This is all part of Microsoft's promise to let you build using any language, tool, or framework.

ALWAYS ON, ALWAYS HERE

Build resilient applications with automatic operating system and service updating, built-in network load balancing, and geo-redundant storage. Microsoft Azure also proudly delivers a 99.95% monthly SLA. You can rely on decades of experience in data center operations and trust that everything Microsoft Azure offers is backed by industry certifications for security and compliance.

DATA CENTER WITHOUT BOUNDARIES

Microsoft Azure makes it easy for you to integrate your on-premises IT environment with the public cloud. Migrate your virtual machines to Microsoft Azure without the need to convert them to a different format. Use the robust messaging and networking capabilities in Microsoft Azure to deliver hybrid solutions, and then manage your hybrid applications from a single console with Microsoft System Center.

GLOBAL REACH

With data centers around the globe, a massive investment in data center innovation, and a worldwide Content Delivery Network, you can build applications that provide the best experience for users, wherever they are.
