

# Track inventory and stock seamlessly

An on-the-go mobility suite made specifically for the Microsoft Dynamics for Retail platform.

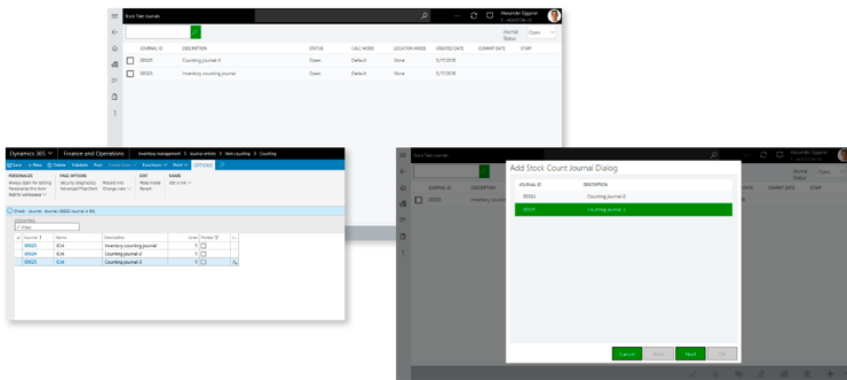

[REQUEST DEMO >](#)

## LABELING MADE EASY

MAX Mobile allows you to verify the product label description and price of a product. If the price is incorrect and a new label needs to be printed, it can be printed immediately on a Bluetooth mobile printer, such as a Zebra mobile printer.

[CONTACT US](#)

## LIVE STOCK TAKE

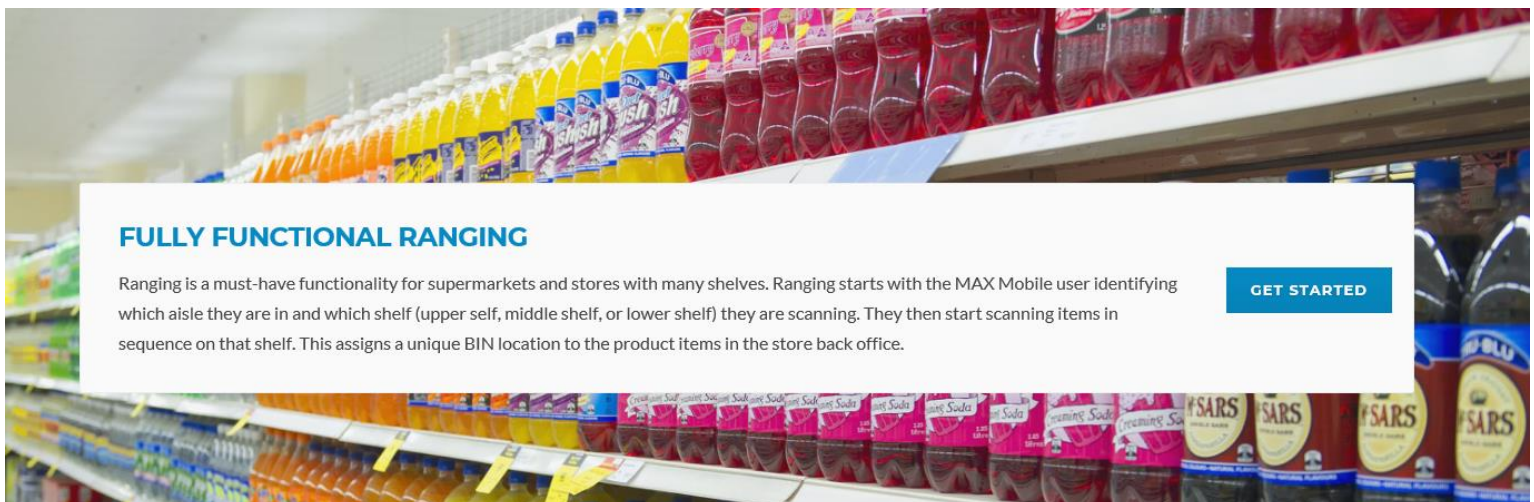

The Stock Take option allows you to use the standard Dynamics 365 | AX stock take batch and perform inventory counts while the Store is open and running. The MAX Mobile back office lets you revise the total and takes into account the items sold.

The ability to perform a cycle count at the store using Microsoft Dynamics mobile Android or Windows devices will speed up the inventory cycle count while increasing staff accountability and reducing pilferage.

## FULLY FUNCTIONAL RANGING

Ranging is a must-have functionality for supermarkets and stores with many shelves. Ranging starts with the MAX Mobile user identifying which aisle they are in and which shelf (upper self, middle shelf, or lower shelf) they are scanning. They then start scanning items in sequence on that shelf. This assigns a unique BIN location to the product items in the store back office.

## KEEP UP WITH MOVING PRODUCT

MAX Mobile elevates Microsoft Dynamics 365 with inventory-based environments. Stock take, ranging, label, price check, fire sell – it can do it all.

### MAX Mobile is packed with Features

#### Price Check

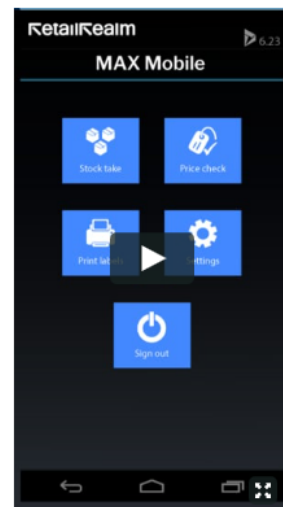

The mobile device enables the scanning of an item and the capture of the price as well as descriptions and product variables, such as size, color, fit, manufacturer, etc.

#### Fire Sell

This function allows the identification of specific items and the ability to place them on sale for a specific price. This can be because an item is slightly damaged or because it is expiring. In the latter case, the date of expiration is also taken into consideration at the time of sale. Items that have already expired will not be allowed to sell at the POS.

This feature is ideal for pharmacies, groceries and supermarket retailers. The Bluetooth mobile printer prints a fire sale label with a unique bar code associated to a Dynamics 365 or AX Info Code with a \$ amount or % discount.
