

LEARN MORE ABOUT OUR

# Power BI Architecture Design

Rightpoint can help you create real insight to drive profitability and improve organizational performance. Leverage our Power BI Architecture Design to develop architecture, strategy and governance to optimize how you deploy Power BI.

Power BI has quickly become the most popular self-service Business Intelligence delivery tool in the world. Large enterprises desire to enable the promise of self-service business intelligence but are concerned about:

- Data security
- Data redundancy
- Governance
- Training

## Our Process:

- Work with IT and business to develop appropriate data architecture to support Power BI deployment
- Explore data sourcing and integration options for enterprise data
- Design an enterprise meta-data layer that supports self-service BI and minimizes redundant efforts
- Develop a governance process to support Power BI and enterprise data
- Create a training and execution plan to facilitate Power BI roll-out

RIGHTPOINT'S

## Power BI Architecture Design helps you:

**Leverage** enterprise data

**Provide** appropriate security and governance

**Train end users** to effectively utilize Power BI and leverage enterprise data assets
