SKYSYNC

SkySync Analyzer

Discover, analyze and deliver unprecedented insight into any enterprise-wide migration or integration initiative.

Interrogate enterprise content— anywhere and all at once

Organizations have little insight into one of their most valuable assets -- content. It is an immense operational and technical challenge to determine precisely how much content exists, its structure, makeup, and location.

SkySync's highly-scalable analyzer is purpose-built to simultaneously interrogate thousands of file storage endpoints and repositories, no matter if they are in the cloud or on-premises, within remote office networks, ECM systems or even user PCs.
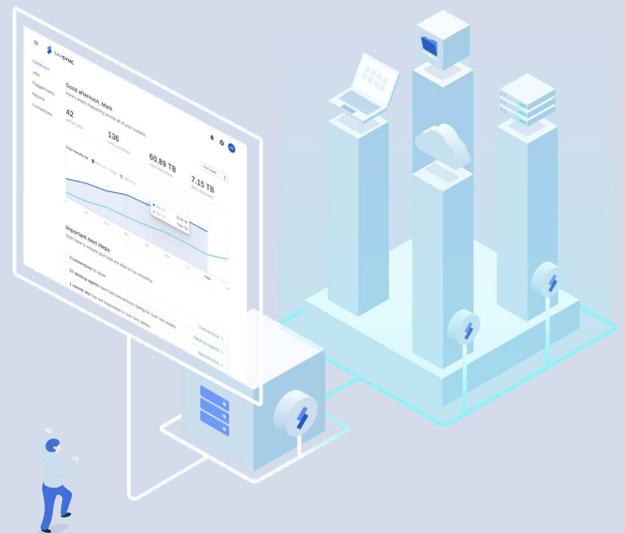

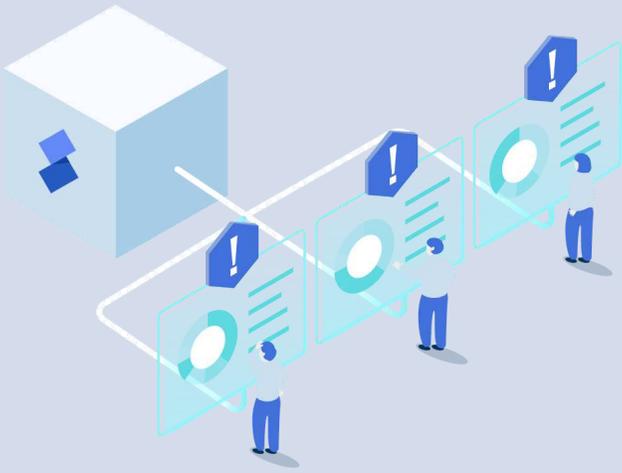

Deep insight into file metrics, structure and sharing behaviors

SkySync gathers a wide array of file statistics and visualizes the data into easy-to-read, configurable dashboards. Sort and analyze content by:

- Physical location
- Type
- Age
- Permissions
- Most shared
- External sharing metrics

Configured reports can be displayed and utilized to initiate SkySync file transfers.

Content without boundaries.

Identify and group flagged files

SkySync identifies any files that may cause transfer issues and automatically flags, groups and notifies system administrators of any files that the platform cannot transform to resolve.
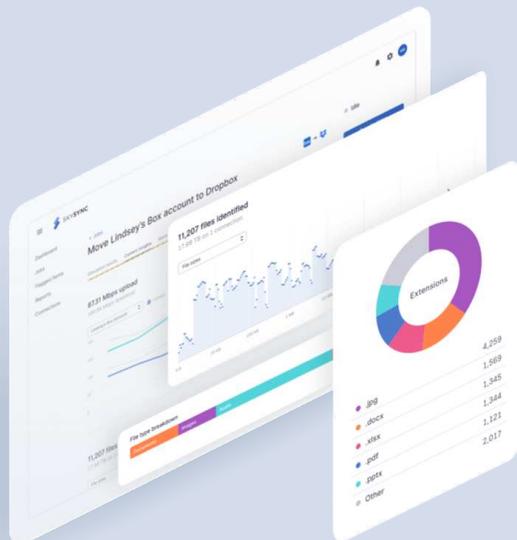

The analyzer provides the root cause for the flag, as well as recommendations on how to repair the file.

Incredible execution and speed

The advanced analyzer employs the same underlying high-speed/high-scale platform engine that powers SkySync's file transfers.

Leveraging the engine, this dramatically reduces file discovery time—interrogation that once took weeks or months now takes mere hours.

Within ideal environments, SkySync can discover and interrogate **up to 200 terabytes/day**.

Precisely predict outcomes and timelines

SkySync will assess for source and destination platform compatibility and precisely predict the outcome of any file migration, copy, or sync operations between those platforms.

The analyzer estimates completion timelines for the entire organization, by any department or even by individual user.

You'll know exactly what will happen during your file transfers, before moving a single item.

SkySync enables the world's most successful enterprises with total control over and unbounded access to their content, empowering their evolving modern workforce. We connect disparate storage platforms, unite silos of information, and synchronize content spread across the enterprise—at scale. We enable our customers to achieve singular access and unified control over their content, so they can support the evolving needs of a modern workforce.
