1. General

1.1 Purpose

This document describes the new releases of To-Increase Business Integration Solutions for **Microsoft Dynamics 365 for Operations update 8 and 9**. Please read this document carefully before installing. If you are interested in the practical how-to information we provide on the To-Increase blog, you can follow the links we provide in some sections of the document. You find our blog at www.to-increase.com/blog/.

1.2 Audience

The document audiences are consultants and customer end users.

1.3 Installation Notes

To install Business Integration Solutions you need a valid license key. The following licenses are available:

- Business Integration Solutions
- Connectivity Studio
- EDI Studio

1.4 Software Requirements

Business Integration Solutions components are released on the following kernel build. This means that this version **installs on Update 3 and higher (update 9)**.

Version	Kernel build	Application version
Microsoft Dynamics 365 for Operations – Update 3	7.1.1541.3036	7.0.4307.16141

1.5 Documentation

Help documentation for Business Integration Solutions is available on the **WIKI (click here)**.

1.6 Support

You can obtain information regarding technical support from your Microsoft Dynamics AX partner. You can also contact To-Increase through the **Partner Portal** or send email to productsupport@to-increase.com.

1.7 Labels

This release is shipped with U.S. English labels. Please contact your Microsoft Dynamics AX partner for labels in other languages.

2. Improvements and fixes

2.1 GENERAL

- RESOLVED: License keys are updated with the new security certificate.

REMARK

After installation of this release you need to load new To-Increase license files. If you do not have received the new license files yet, please send an email to salesupport@to-increase.com.

2.2 Connectivity Studio

- IMPROVED: The field PurchPrice on the PurchLine is now also calculated for product variants with a price agreement.
- IMPROVED: Azure service bus was not always connecting.
- RESOLVED: An export with a view is not exporting all the records.
- IMPROVED: Added strFmt support in custom range
- RESOLVED: Error during message run if the fieldname is not the same as the AxField for bisbuffer table.
- RESOLVED: The XML reader doesn't read the file correctly when the table and field have the same name.
- IMPROVED: Add attachment sign to customer and vendor form for EDI customers / vendors.

2.3 EDI Studio

- RESOLVED: The EDI history management button was not working on the EDI inventory order journal and EDI transfer order journal.

REMARK

This release not yet contains the new feature to initialize fields on the ODBC document using the CDATA or the DEVART ODBC driver. The initialize fields feature only works for SQL ODBC driver only.

3. Known issues

3.1 FileLocations.xml missing

There is currently a known issues during installation using LCS. The error message indicates the FileLocations.xml is missing. In this case, click **Resume** in LCS to continue the installation.
