

Centralized management and monitoring for third-party integrations, advanced error logging, and file import/export

Integration Cockpit for Microsoft Dynamics 365 for Finance and Operations is a collection of valuable utilities that simplifies the management of third-party integrations, provides a detailed error logging framework, and streamlines file import and export. It helps reduce integration time, simplifies integration monitoring, and is in line with Microsoft's evergreen, one-release format.

Finance & Operations

Benefits

Simplifies integration monitoring

Email alerts for errors reduce response times

Reduces implementation time, effort, and cost

Accelerates debugging for custom code

Integration Framework

Integration Cockpit's Integration Framework simplifies the configuration and day-to-day administration of all API-based third-party integrations for your Dynamics 365 for F&O implementation. It uses easy-to-manage configuration screens to provide all setup options and logged information in a concise, consolidated format.

 <p>Easily add and enable or disable particular third-party API integrations</p>	 <p>Enable or disable specific interfaces within each integration</p>	 <p>Set endpoint URLs, credentials, request schema templates, and key/value pairs</p>	 <p>Access detailed logs, including the actual XML requests sent and responses received by each integration interface</p>	 <p>Configure an error notification email template and recipient list for each interface</p>
---	--	--	--	---

Error Logging Framework

Integration Cockpit's Error Logging Framework provides an unprecedented level of detail about errors that occur in custom code in your Dynamics 365 for F&O production environment. Instead of spending hours or days replicating errors in a test environment, you can quickly isolate and identify bugs as they arise.

 <p>Displays a list of each error generated by all custom code in your Dynamics 365 for F&O implementation</p>	 <p>Provides the exact line, method, stack trace, and message associated with each unhandled exception</p>	 <p>Configure an error notification email template and recipient list for each error type</p>
---	--	--

File Handling Framework

Integration Cockpit's File Handling Framework simplifies the import and export of file-based information for Dynamics 365 for F&O. Migrate data between different Dynamics implementations and easily archive your records.

 <p>Migrate data between Azure blob storage and Dynamics 365 for F&O's data management framework</p>	 <p>Easily map recurring data entities and configure file location</p>	 <p>Log all data import/export events and errors</p>	 <p>Email notifications inform users about transfers</p>
